Recommended Product Applications

The following application chart is provided to aid in understanding where our flooring products are recommended for use. This application chart is a subjective recommendation and is predicated upon the adherence to proper installation techniques; specific location of installation; level of foot traffic; and the type and professional level of maintenance practiced on-site. As there is a wide range of variables within an environment and the characteristics of each application may vary significantly, please consult with your CBCA Flooring sales representative to determine which CBCA Flooring product is appropriate for your installation.

Notes:

According to ASTM, the F925 test method is subjective and test results are nonnumeric;
 This test is not a stain test - it is intended to determine the effect specific chemicals (or agents) will have on the surface of the flooring;
 The flooring product is tested without any applied sealers or floor finishes;
 For the most accurate results, CBC America recommends using the customer's chemicals on actual product samples that have been treated with the maintenance products to be used on the finished floor;
 Flooring sample material for testing is readily available from CBC America;
 For more detailed information, please contact CBC America.
